See-Kiong Ng, PhD
Advisor
Data Analytics Department
Institute for Infocomm Research (I2R)
Agency for Science, Technology and Research (A*STAR), Singapore

See-Kiong Ng is the Programme Director for the Urban Systems Initiative by the Science and Engineering Research Council of the Agency of Science, Technology and Research (A*STAR). The Initiative seeks to address the new challenges of the rapidly urbanising world through technology and innovations. See-Kiong is also the Center Director for the Business Analytics Translational Center (BATC) that is co-founded by the Agency of Science, Technology and Research (A*STAR) and the Info-communications Development Authority of Singapore (IDA) to catalyze innovation, perform technology translation, and drive adoption of business analytics in Singapore. He holds a concurrent appointment as a Principal Scientist and the Advisor to the Data Analytics Department at the Institute for Infocomm Research (I2R), A*STAR. See-Kiong obtained both his BS and PhD in computer science from Carnegie Mellon University(CMU), with an MS from University of Pennsylvania. His primary research is in data mining and machine learning, with applications in text mining, bioinformatics, privacy-preserving data mining, and social network mining. See-Kiong has a long-standing interest in cross-disciplinary applied computer science research. He wrote the TrueAllele software when he was a graduate student at CMU. The program was subsequently used by a biotech company in Iceland to genotype the Icelandic population -- thus began his cross-disciplinary journey into the exciting field of genomics as a computer scientist. See-Kiong has since been able to apply what he had learned from bioinformatics to a wide array of application domains, from social network analysis to sensor stream data mining. He has published widely, with close to 100 papers in leading peer-reviewed journals and conferences across multiple disciplines.
